

U.S. ARMY TANK-AUTOMOTIVE AND ARMAMENTS COMMAND

Armament Research, Development and Engineering Center

Picatinny Arsenal, NJ 07806-5000

Anthony J. Sebasto

Acting Associate for Technology

Fire Support Armaments Center

Mr. Sebasto has more than twenty years of service with the Federal Government in a variety of research, development and production positions at TACOM-ARDEC.

Mr. Sebasto is currently the Acting Associate for Technology, Fire Support Armament Center, at U.S. Army TACOM-ARDEC. In this position, he is responsible for the development and management of Center-wide technology base programs spanning the Fire Support mission area to include artillery, mortars, and fire control.

Most recent assignments include Acting ARDEC Associate Technical Director for System Concepts and Technology, Associate for Technology in the Close Combat Armaments Center, and System Manager for the Direct Fire Lethality Program.

Mr. Sebasto is a graduate of the University of Delaware with a Bachelor of Science Degree in Mechanical Engineering, and

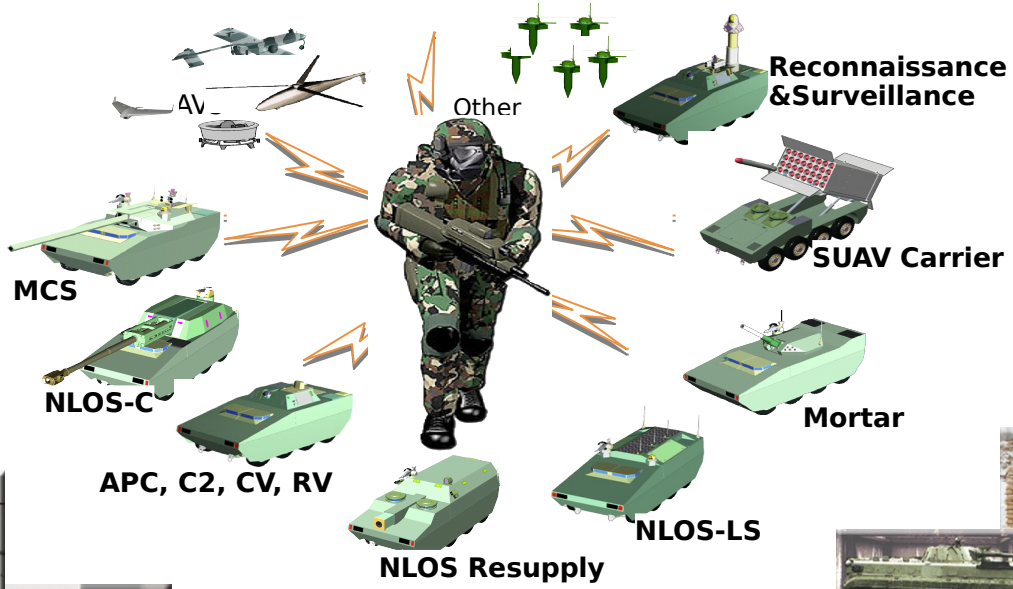
Transformational Lethality



Diverse Suite of Weapon Systems to FINISH DECISIVELY

Lethality Challenges

- ***ALL Engagement Scenarios – LOS/BLOS/NLOS***
- ***ALL Environments – Day/Night***
- ***First Round Kills***
- ***Target Detection/Recognition – Advanced Targets***
- ***Command, Control, Communications – Networked Fires***
- ***Increased Range - Standoff***
- ***Maximize Stowed Kills – Minimize Size, Weight***
- ***High Performance, Low Vulnerability Energetics***
- ***Rapid Rearm***

Affordable Overwhelming Lethality

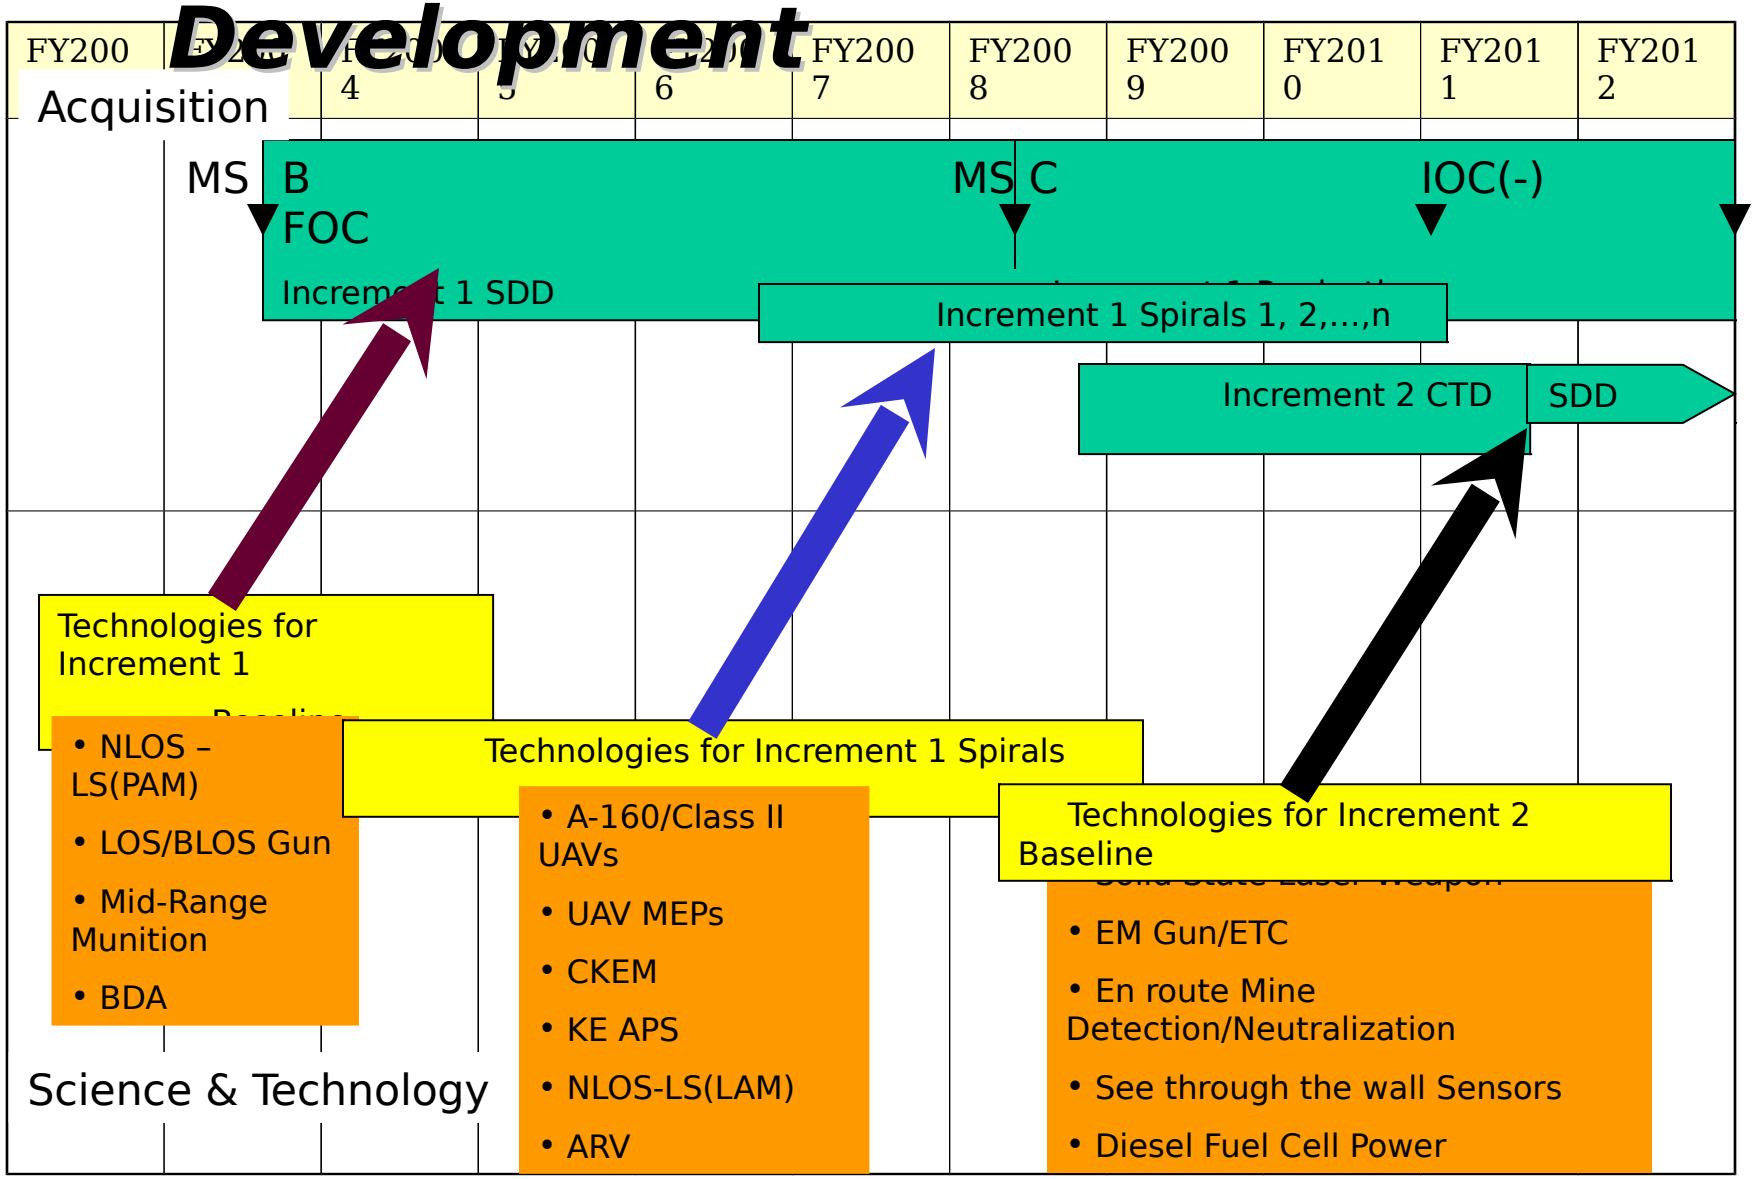
S & T Strategy for FCS Spiral Development



XM307 OBJECTIVE CREW SERVED WEAPON
Increment I Capability

Objective: **Provides the mounted & dismounted warfighter a crew served weapon system *one third the weight of M2 & MK19 MGs, with overwhelming lethality* capable of defeating protected, defilade**

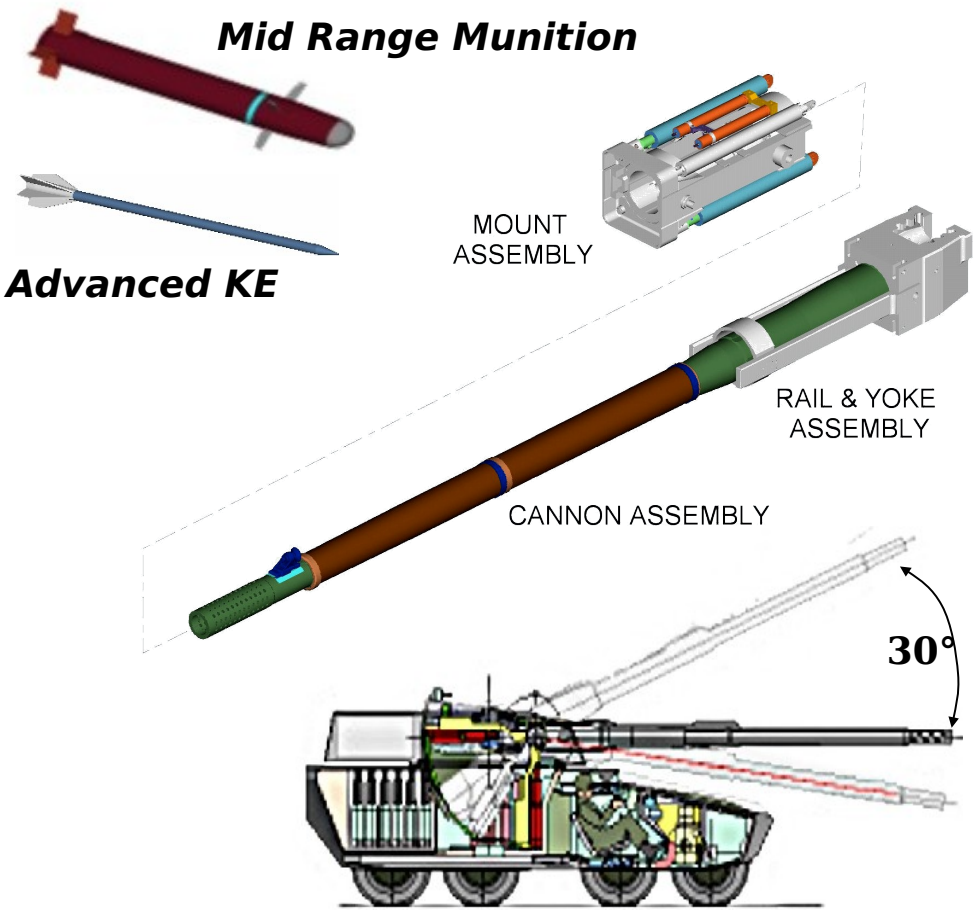
- **LtWt, 2-man Portable (50.3 lbs)**
- **25mm Air-bursting Munitions**
  - **Defeats Defilade Targets**
- **Armor Piercing Munitions**
  - **Defeats Lt Armored Vehicles**
- **Day/Night/All Weather Capable**
- **3 system integration demonstrations completed**

Shoots/Handles/Maintains Like A Light Machine Gun

PEO

FCS 120mm LOS/BLOS System ATD Increment I Capability

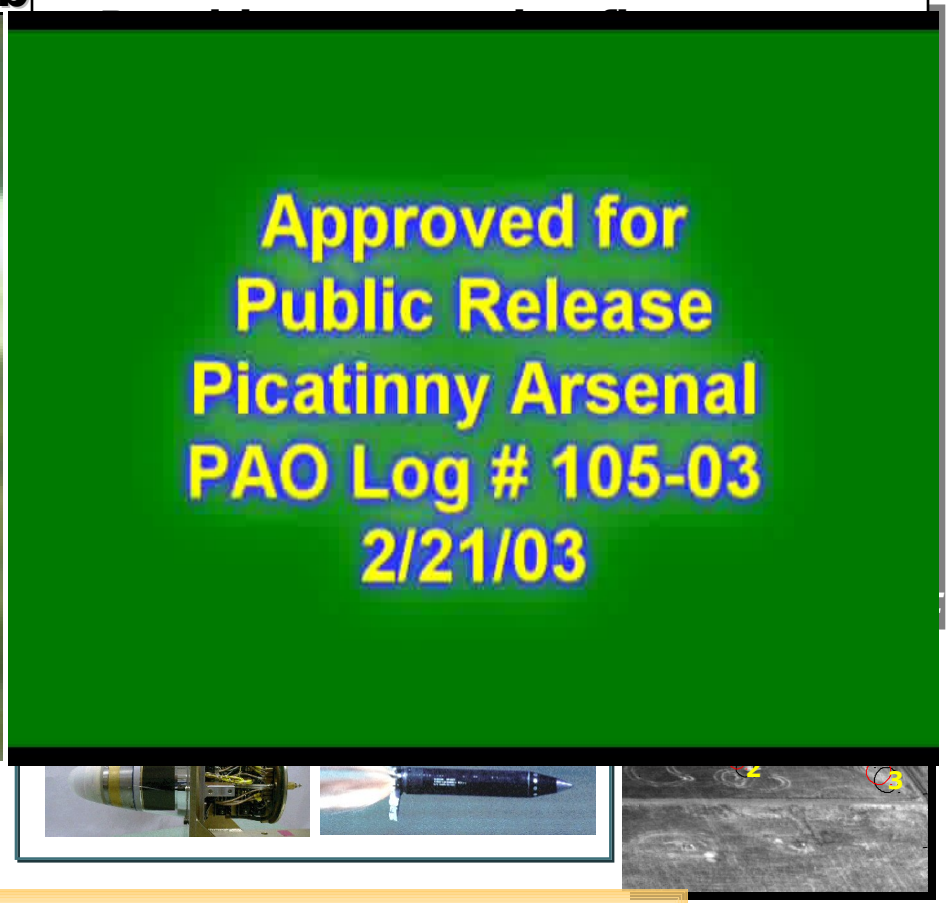
Objective: Demonstrate 120mm Line-of-sight (LOS) and beyond line-of-sight (BLOS) armament system components and ammunition suite for Mounted Combat System (MCS)



- Robust LOS/BLOS Lethality 0-12km
- Criticial technologies:
  - Ltwt (<4400lb), reduced impulse cannon
  - Advanced Kinetic Energy Munition
  - Mid Range Munition
  - Fire Control
  - Ammunition Handling
  - Electrothermal ignition
- Cannon design underway
- PM-Lethality sponsored TRL 5 Dynamic Response cannon demonstrator critical enabler to ATD success
- All components TRL 6 end FY04 (1Qtr04 for MRM)

Mid Range Munition (MRM)
Increment I Capability

Objective: Provide Mobile Combat System with a 120mm precision munition capable of defeating advanced high valued targets out to 8km and beyond



Critical Enabler for Force Lethality and Survivability

Multi-Purpose Warheads
Increment I and Spiral Capabilities

- **Develop ar**
  FY09 for:
  - ***Shape Charg***
    - **50% shorter**
    - **Equal or bett**
    - **Multi-Mode f**
  - ***EFP warhea***
    - **>50% penetr**
    - **Multi-mode f**
  - **Multi-Point**

- **Support Tr**
  - **Maximizes**
    against bro
  - **Enables fe**

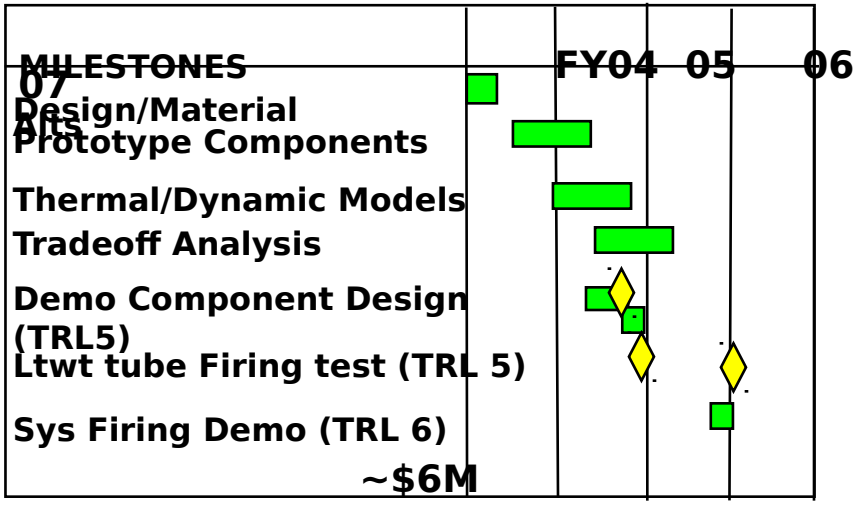
elicopters

Increased lethality over a broader spectrum of targets

Lightweight Dismounted Mortar Weapon

Increment I Spiral Capabilities

Schedule



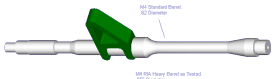
- 30 to 40% lighter weapon system
- Improve transportability and logistics
- Critical Technology:
  - Advanced metal matrix and composite materials
- TRL 6 demo FY06 with up to 30% reduced weight
- TRL 5 demo FY06 for advanced gun tube to enable up to 40% reduced weight in SDD
- Transition to PM-CAS FY07

Lightweight Machine Gun and Ammunition

Increment I Spiral

Caseless or Plastic Cased Ammunition

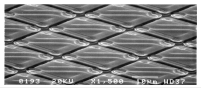
Embedded



Ceramic Barrel

Simple Reliable Mechanism

Composite Structures



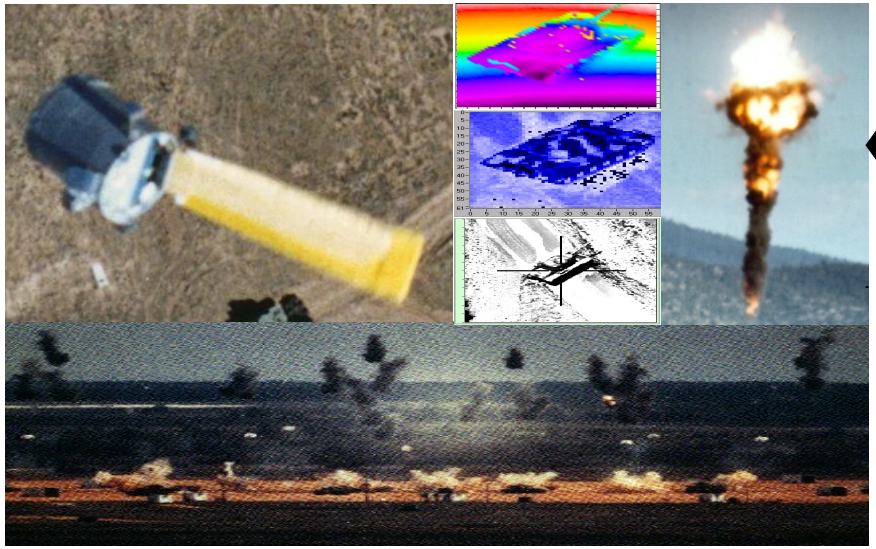
Milestones	FY04	FY05	FY06	FY07
Component Studies and Demos				
Weapon Component Demos				
System Concept Design Phase				
Virtual Design of Weapons and Ammunition				
Development of Ltwt Machine Gun				
OFW Demo with Ltwt Machine Gun			5	
Early Operational Test of Ltwt Machine Gun	X	TRL		6

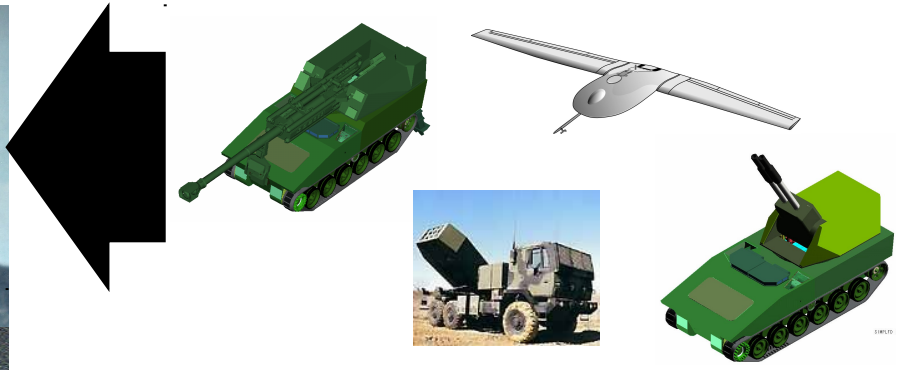
~$60M

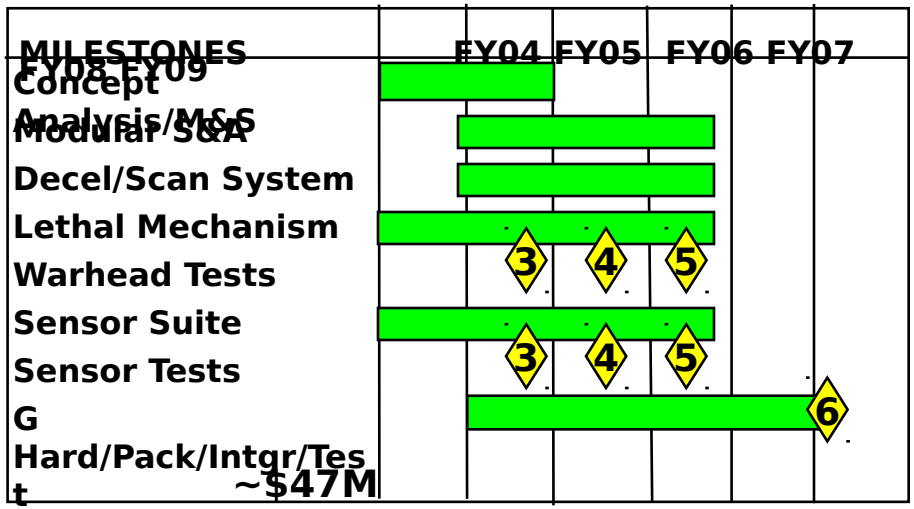
- Equivalent capability of current light machine gun at 20%-35% lower weight.
  - "Clean sheet of paper" approach
- Increased mobility and maneuverability, reduced training and maintenance
- Critical Technologies:
  - Lightweight materials
  - Recoil Management
  - Thermal management
  - Caseless ammunition
- TRL 6 in FY07 prototype live fire testing
- Transition to PM Soldier Weapons for SDD

Common Smart Submunition

Increment I Spiral Capability





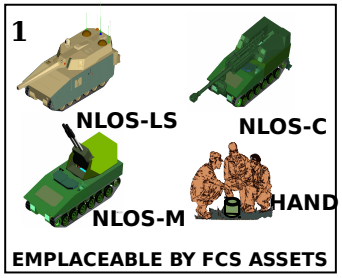


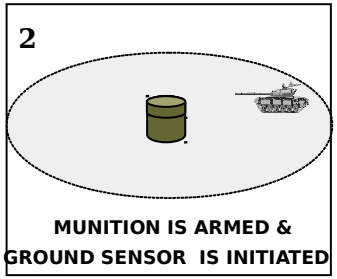
- ***Full function submunition for multiple platforms including guns, missiles, and aerial dispensers.***
- ***Application to 120mm and greater***
- ***Takes advantage of future, more accurate delivery systems***
- ***Affordability based on design and economy of scale.***
- ***Critical Technologies:***
  - ***Combined Effects EFP Warhead***
  - ***Multi-mode Sensor***

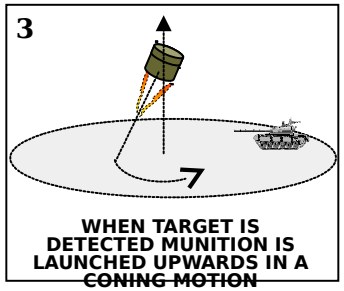
Future Intelligent Munition (FIM)

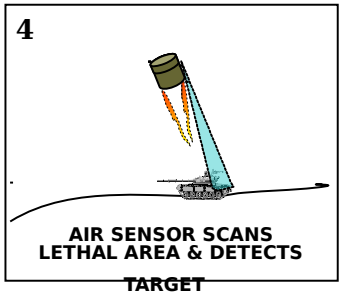
Increment I Spiral Capability

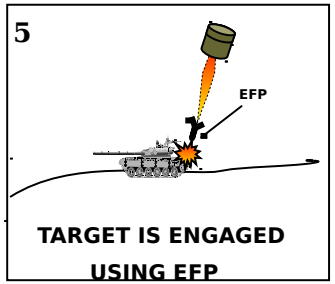
AMC









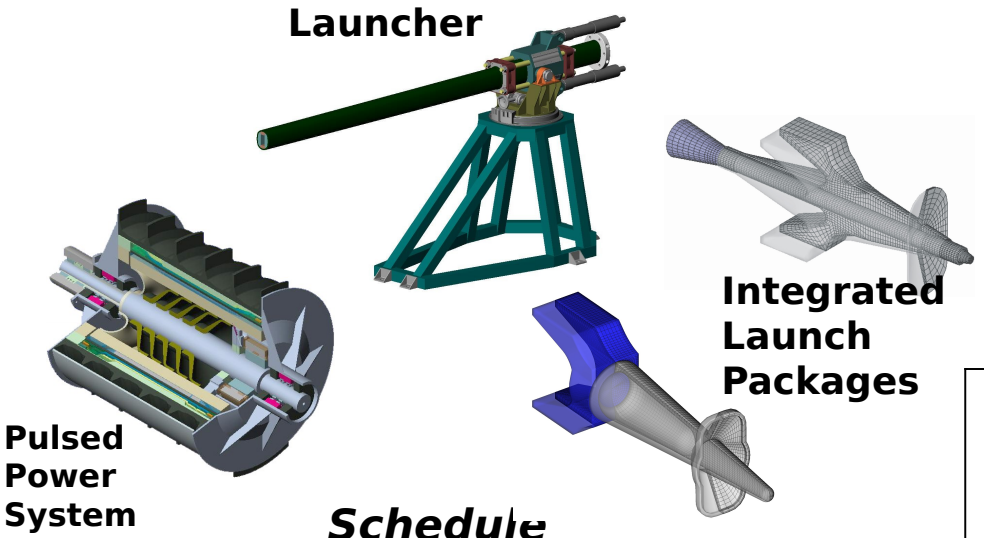


MILESTONES	FY04	FY05	FY06	FY07	FY08	FY09
Sys. Simulations & Refinement						
Ground Sensor Development						
Air Sensor Development						
Propulsion/Stabilization System						
Critical Component Hardening & Testing						
Virtual System Integration						
Integrated Demo						

Total Army $19.8M

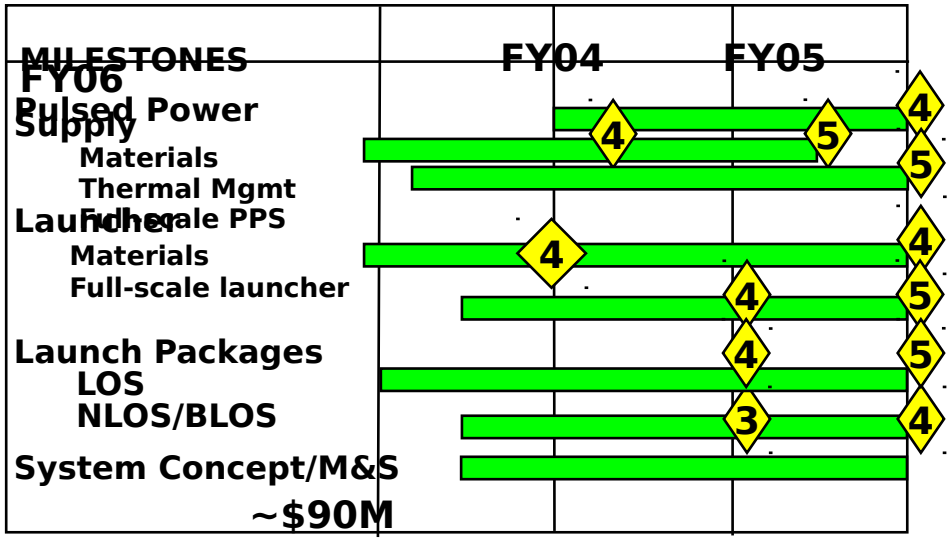
- Smart Scatterable Area Denial Munition
- Provides remote emplacement at tactical distances from FCS platforms
- 70% Fewer Munitions per barrier vs FASCAM
- Critical Technologies:
  - Combined Effects Warhead (Common warhead with CSS)
  - Target Acquisition Sensors
- Demo G-survivability for

EM Gun Technology Maturation & Demonstration
Increment II Capability



System Concepts & Trade Studies

Schedule



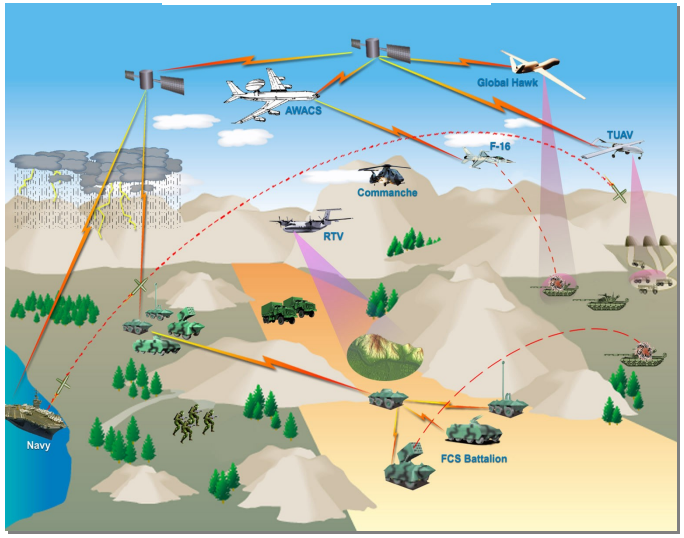
- Mature/demonstrate major subsystem performance characteristics at or near full scale
  - Pulsed Power System
  - Launcher
  - Integrated Lanuch Packages
- Demonstrate utility of hypervelocity for armor defeat
- Demonstrate HE/electronics launchability
- Mission area trade study to determine best system application for potential follow-on ATD beginning FY07

Modeling Architecture for Technology and Research Experimentation
(ARDEC Contribution)

AMC

MATREX

ARMAMENT RESEARCH DEVELOPMENT & ENGINEERING CENTER PICATINNY, NJ



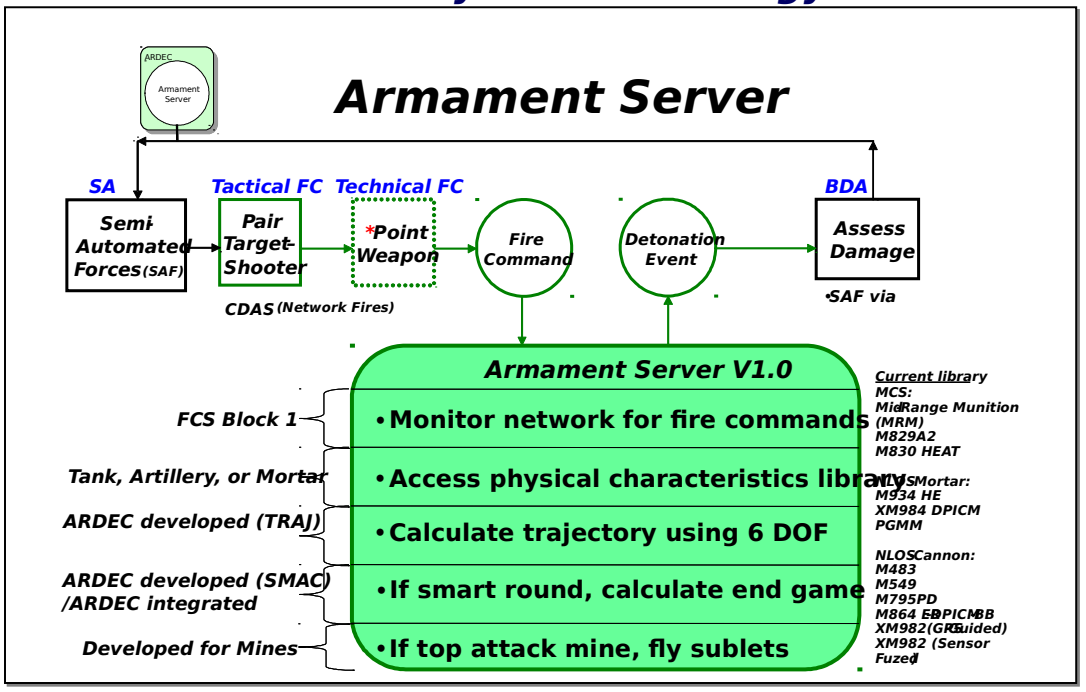
Objective: Provide persistent, distributed simulation environment for evaluation of Future Combat Systems and Objective Force concepts

Product:

- ***Full spectrum capability for SMART***
- ***Realistic engineering representation of systems and environments***
- ***Reusable environment where sub-system models can be integrated into an established architecture for analysis & technology trades***

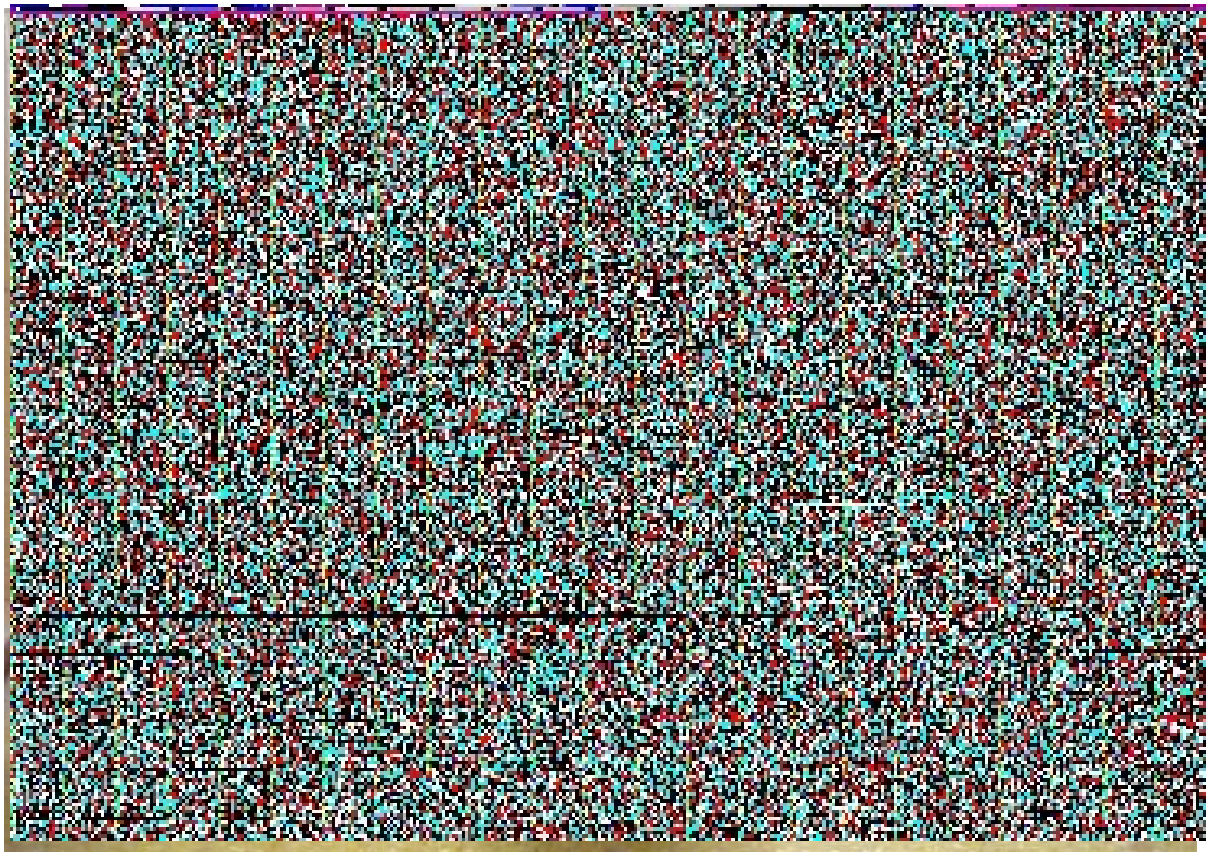
MATREX Schedule

Tasks	FY03	FY04	FY05	FY06	FY07
▪ Architecture design and develop					
▪ Enhance and evolve architecture					
▪ Support FCS C4ISR experiment					
▪ Support LSI Capstone Demo					
▪ Conduct 1st App Baseline					
▪ Demonstrate engineering models for use by TRADOC, ATEC and LSI					
▪ Architecture releases with documentation		v0.5	v1.0	v2.0	v3.0



AMC

Armed UGV



- **Rapid Demonstration Program**
- **Explore Armament Integration Issues on Small, Lower Cost UGV**
- **Support Customer Demonstrations**

Summary

- **Key Lethality Technologies Maturing for Increment I Transition and Follow-on Spiral Insertions.**
- **Key Focus Areas:**
  - **Affordable Smart Munitions**
  - **Lighter Weapons/Ammo for Dismounted**
- **Strong Presence in Distributed Collaborative Environment Through the Armament Server**
- **Growing Emphasis on Armament Integration on Unmanned Ground/Air Platforms**
